### ***PLEASE NOTE:***

Due to numerous variations in original harnesses please supply the following information:  
*MODEL, YEAR, SERIAL #, IGNITION TYPE* (magneto or distributor), and  
*CHARGING SYSTEM* (cutout relay, regulator)

Any reference to OEM part numbers is for comparison only  
The harnesses listed in this catalog are aftermarket replacement parts and are NOT OEM parts

### **HARNESSES GENERALLY INCLUDE:**

All wires except: BATTERY CABLES, SPARK PLUG WIRES,  
DASH LAMP LEADS and OPTIONAL FUSE WIRES - unless otherwise specified  
Battery cables, switches and ignition wires are available for many applications

- Prices **DO NOT** include Shipping & Handling -

**THE CORRECT USE AND INSTALLATION OF OUR PRODUCT IS THE  
RESPONSIBILITY OF THE INSTALLER!**

**\*\*\*\*\*Please call or e-mail for current lead-time \*\*\*\*\***

**If you have special time constraints, we will do our best to accommodate your needs.**

We welcome your suggestions and comments  
Thank you for your business!

## Catalog Updates

If you wish to receive catalog updates by email, send an email request to: [agriserv@rochester.rr.com](mailto:agriserv@rochester.rr.com) we will add you to our E Catalog list, and send periodic updated pdf catalogs by email. If you prefer a printed catalog, call or email your request and we will send a current copy in the mail.

## Harness Repair Service

We can often repair/rebuild damaged harnesses by replacing wires, connectors, and braiding. This service is priced on a time-and-materials basis and is most cost effective for those harnesses which were damaged in small areas from burns, abrasion, and short circuits. Because of the inherent deterioration of insulation, conductors, and connectors over time, only those harnesses that are in otherwise good condition would be candidates.

## If we do not have a listing for your tractor:

If you need a harness that we do not have a pattern for, we will need to copy your original harness. If the harness is not suitable to use as a pattern, you may be able to obtain a factory blueprint through your dealer or draw a pattern that we can use. In addition to the blueprint, copies of any related parts book or service manual pages would be helpful. If your tractor is in Western New York or in the Niagara region of Ontario, we may be able to measure the tractor at your location.

## If you have questions or problems with your harness installation:

If you have any questions on the installation of your harness, or if you find that we should make any changes to our pattern, please contact us as soon as possible. If we have made an error in building your harness, we want to make any necessary corrections before we build any more. If you have installation questions, or if you simply just wish to confirm that you have everything properly connected before starting the tractor for the first time, we welcome your calls between 9:00 AM and 6:00 PM, EST Monday through Friday.

## Polarizing Your Generator

All Delco and Autolite generators must be polarized whenever the generator or battery is disconnected. Most of these systems are known as a Type A system, where the generator field circuit is grounded outside of the generator. To polarize these Type A generators, momentarily touch a jumper lead from the regulator or cutout relay "BAT" terminal to the regulator or cutout relay "GEN" terminal. This must be done before the tractor is started. Extreme damage to the generator, wiring, ammeter, and regulator (or cutout relay) will result if the battery and generator polarity are not matched.

## Why Buy from Us?

When you order one of our harnesses, you can be assured that every effort has been made to provide the most accurate product possible. Our harnesses are not just copies of the originals. **Every pattern is closely analyzed to eliminate weak points in the original design.** We will make upgrades in wire sizes, connectors, and terminals where **our decades of experience in electrical system design,** and engineering expertise indicate. **We utilize cross-linked polyethylene insulated wire,** which is far **superior** to PVC insulated wire, in all our plastic wire applications. To make installation of our harnesses as easy as possible, **every wire is labeled on at least one end,** and many complicated harnesses have the wires labeled at each connection point. **We include a connection sheet** which lists all the wire numbers, color and connection points. Our **technical support** before and after you purchase a harness from us is second to none. Based on our thorough general knowledge of electrical systems, and specific knowledge of how the original systems were designed, **we will guide you** through any diagnosis, installation, or question that you have. Do not hesitate to call or email.

**NOTE 2:** Molded connectors are replaced with Packard connectors. These will not mate with the original molded connectors. Any original harness that will be mated to our new harness will require new Packard connectors to be installed. Some other connectors or housings will also need to be reused.

**NOTE 3: Autolite:** Square gauges with outside borders, gauge needles pivot at top, 3 panel lamps.  
**Stewart Warner:** With no borders, gauge needles pivot at bottom, 2 panel lamps.

## Ford/New Holland/Versatile Section 5

**Note A:** Fusible links will be replaced with circuit breakers on all harnesses that we build complete or repair.

- Conventional metal circuit breakers: \$6 ea.
- Marine Duty Circuit Breakers: \$30 ea.

**Note B:** Some applications may require that we use alternate connectors in place of non-reusable original connectors. This will require that you install a mating connector kit on the remaining original harness. Connector kits vary in cost from \$5 to \$100.

**Note C:** Ford tractors from 1965, have a unit code to determine the build date, and it is located above the serial number. The 1<sup>st</sup> number is the year, 2<sup>nd</sup> letter is the month, 3<sup>rd</sup> and 4<sup>th</sup> digits are the day, and next letter is the build shift. EX: 9B22A: 1969, '79 or '89; February; 22<sup>nd</sup>, A shift

Jan: A, Feb: B, March: C, April: D, May: E, June: F, July: G, Aug: H, Sept: J, Oct: K, Nov: L, Dec: M

**Note D:** The "A", "B" or "C" prefix on the serial number identifies the sales market: "A" or "B" = UK, "C" = NA

**Note E:** Voltage stabilizer connections: "B" Ignition power, "I" power feed to gauges

- **Harness repair/rebuilding:** Priced on a time and material basis. Cost generally ranges from \$200- \$1000

**Note B:** If equipped with flexible metal conduit on rear lamp harness please add \$ 25.00  
For Farmall, and \$ 35.00 for the W series.

**Note C:**

These tractors were originally equipped with  
either a Voltage Regulator or a cutout relay.

Voltage Regulator:  
(from 1948)

- 3 terminals on one side ("BAT" "L" "FLD") and 1 terminal on the other side or on the bottom ("GEN")
- 3 position light switch ("OFF" "D" "B")
- Fuse housing assembly mounted through panel between the ammeter and light switch

Cub-Mounted below generator on governor housing  
Others-Mounted on back of light switch box or rear fuel tank support

Cutout Relay:  
(from 1939-1953)

"GEN" "F"

"BAT"

- 2 terminals on one side ("GEN" "FLD") and 1 terminal on the other side ("BAT")
- 4 position light switch ("L" "H" "D" "B")
- Fuse mounted on light switch (except C, Su A)
- Gasoline tractors-mounted on generator.
- Diesel tractors-mounted on left radiator support

**Note D:**

Our harnesses are made to use an external ignition resistor on  
Those models that used a resistance wire as part of the original harness.  
The external ignition resistor is mounted by the coil to eliminate possible  
harness damage from excess heat.

**Note E:** A, B, BN Price includes braided covering on leads to starter and ignition coil on  
distributor equipped tractors.

## John Deere Section 7

**NOTE A:** The tractors listed require various special connectors that we must reuse from the original harnesses or use alternatives. Original connectors may be available at extra cost.

**NOTE B:** The Packard 10 pin and 12 pin "Twin Lock" connectors used to connect the engine Harness to the main/instrument harness, and the main/instrument harness to the Dash harness are no longer available from Packard. We use Packard "Type 56" Male and female connectors on our harnesses. The "Type 56" connectors have a Positive locking connection between the male and female terminals, and they provide A superior electrical connection. For those who wish to reuse some of the original harnesses, we can supply a mating connector kit that can be installed onto the original harness. The round pin connector used for the main power connections between the harnesses on later models has also been discontinued by the manufacturer. We have developed a superior round pin connector that will mate with the original connector.

**NOTE C:** **Alternator Conversions** from a generator usually have a higher current output than the Generator that was replaced. In most applications, the alternator conversion will require Larger gauge wires, which will increase the cost of the harness (from \$20) over the stock version. 12-volt conversions from 24 volts may also require a relay harness (from \$54) And relay bracket (\$20). (Remote mount relay/CB harness JD61R \$54, JD61R-1 \$78)

**NOTE D:** These harnesses were originally covered with tape. We can use vinyl coated nylon braid In place of the tape covering for an additional \$42 on the engine harness.

**NOTE E:** Fender warning lamp wiring can be added to 2510, 3010, 3020, 4010, 4020, 5010, and 5020 Tractors built before 1969, if ordered with the lighting harnesses. Cost for the additional Wiring of two flashing lamps and the flasher unit is \$48.

**NOTE F:** This application requires an external ignition resistor (RU13)

## 24 VOLT Circuit Protection Kit

### John Deere 24 Volt Diesels

**720, 730, 830, 840 2 Cylinder**

**3010, 3020, 4010, 4020, 5010, 5020, 8020**

These kits provide circuit protection to both 12 volt – and 12 volt + legs of the 24-volt system. Type II circuit breakers are used on 2 Cylinder models. Sealed Type 1 circuit breakers are used on 3010 thru 8020. An in-line fuse is included for the 12-volt ground.

*(Installed on 730; regulator bracket NOT included)*

Kit includes the two auto resetting circuit breakers with bracket, all wires to completely install, and complete instructions.

**NO new holes to drill!**

**2 Cylinder:**

When ordered with new harness	\$ 35.00 CPK1
For retrofit installation	\$ 47.00 CPK2

**Important note for tractors with "L" serial number:**

**Some of the connector housings used on these tractors are only available from John Deere and will result in extra cost over our posted catalog pricing. These include, but are not limited to, bulkhead, light switch, parking brake buzzer, fuse holder, fuse strip, relay/switch/buzzer mounting bracket, turn signal switch, lower cab to instrument harness, instrument harness to lighting harness.**

**Some housings are NLA and will be replaced with alternative connectors.**

**GP vs Utility open station identification points:**

**GP has a turn signal switch and relays are mounted individually.**

**Utility does not have a turn signal switch and relays are mounted to a common panel.**

## Important Note for 3010, 4010, 3020 to 123000, 4020 to 201000 Diesels:

Above models may have been updated with a main circuit breaker kit mounted to the 30MT Delco 24-volt starter. Without this kit, short circuit protection is limited to the two lighting circuit breakers.

**WE STRONGLY ADVISE THAT YOU ADD THIS KIT IF NOT ALREADY INSTALLED.**

If converting to 12 volts, you will also need to add a starting relay, which can be mounted to a Delco 35MT starter when also using a circuit breaker bracket, but the circuit breakers and starter relay will need to be remotely mounted with a Nippondenso or other starter. The remote mount starter relay/circuit breaker harnesses allow a choice of location for mounting the starter relay and circuit breakers. The 78" (3010, 3020) or 88" (4010, 4020) length allows the relay and circuit breakers to be mounted on the original voltage regulator bracket and is routed along with the engine harness.

## **FULL LINE of TRACTOR and MACHINERY PARTS NOW AVAILABLE!**

We are now offering parts from Dixie, Riley, Steiner and Sparex as special order and drop-ship items. These companies offer a large selection of quality parts to fit most makes and models of Asian, European, and North American tractors. Parts can be drop shipped from the closest distribution center.

See the on-line catalogs:

**rileytractorparts.com** (parts for vintage, classic Ag)

**sparexusa.com**(parts for vintage though modern Ag, Industrial)

**steinertractor.com** (parts for vintage through classic Ag)

**Parts now available:**

## **FREQUENTLY ASKED QUESTIONS**

**Q: How can I identify a cutout relay from a voltage regulator?**

**A:** A cutout relay used on Delco and Autolite generators is rectangular in shape, and will have a “BAT” and “GEN” terminal located on each end, or on the bottom. Cutout relays used on IH tractors are square in shape, and will have two terminals on one side, and one on the opposite side. The “F” terminal on the IH relay is used only on applications without a light switch. (See the first IH page for an illustration) Mechanical cutout relays will have a single relay unit. Solid-state cutout relays have + and – posts, which are connected to match the system polarity.

A regulator will have one relay unit, and two or three regulating units. Delco and three unit Autolite regulators will have three terminals on one side. Some two-unit Delco regulators will also have a fourth terminal on the bottom or opposite side. Autolite two unit regulators will have an “ARM” and a “FLD” terminal on one side, and a “BAT” terminal on the opposite side.

**Q: How and when do I need to polarize my generator?**

**A:** All Delco and Autolite generators must be polarized whenever the generator or battery is disconnected. Most of these systems are known as a Type A system, where the generator field circuit is grounded outside of the generator. To polarize these Type A generators, momentarily touch a jumper lead from the regulator or cutout relay “BAT” terminal to the regulator or cutout relay “GEN” terminal. This must be done before the tractor is started. Extreme damage to the generator, wiring, ammeter and regulator (or cutout relay) will result if the battery and generator polarity are not matched.

**Q: I want to convert my generator system to an alternator system and I need a wiring harness. What do I need, and why can't I use the same harness as the generator?**

**A:** Some main factors to be considered are the amperage output, if the alternator requires an excitation circuit and if the alternator has an internal regulator. Most wiring harnesses used with generators are limited to about 20 amperes. Most alternators have at least a 40-ampere output, and the Delco 10SI alternator (the most common choice for conversions), is commonly rated at 63 amperes. We recommend that 8-gauge wire be used for more than 40 amperes. If the alternator requires an excitation circuit, it must be isolated from the ignition circuit to prevent back feeding from the alternator to the ignition coil. If the alternator requires an external regulator, the wiring harness will need to include the proper connectors and circuits. Typical required parts: mounting bracket, adjusting arm, sheave, belt, ignition resistor, self-energizing conversion plug, alternator, wiring harness. Most 24-volt to 12-volt conversions will also require a starter relay as well as a 12-volt starter.

**Q: Is there a benefit to me if I order my Steiner parts through you?**

**A:** We usually sell at the same price as listed in the Steiner catalog + shipping. If we include your parts on a stock order, the shipping cost is spread out among all of the items on the order. If you also have a harness on order, and your entire order will fit in a flat rate box, the final shipping cost will be less than shipping two separate orders. We also need to rebuild or modify many of the Steiner parts to meet our specifications, which does increase the cost over the Steiner catalog price.
